「Stick Arm S-T」

「Stick Arm M-T」

## ■ Modification ■

Ball joints on both ends of modified Stick Arms have tripod screw hole 「3/8-16UNC」.

Modified ball joint with 3/8-16UNC threaded hole.

By having the threaded hole on ball joints, modified Stick Arm can be usable not only as a strobe arm but also as a “tripod leg” of upcoming underwater tripod system. This modification expands versatility of Stick Arm with same effective length and compatibility of optional accessories.

Installed on upcoming underwater tripod system as legs.

One end is screwed in 「UW Tripod Hub」 and the other end is combined with a ferrule which comes with the 「UW Tripod Hub」.

Upon this modification, existing arm sets' names are changed as below and current Stick Arm (without tripod screw hole) will be discontinued.
